

Glystro: Characteristics

Integrated and Slim Design

A slim and compact motor combined with a simple track connection harmonises well with various types of windows and curtains.

End Curtain Hook

This hook is mounted on the upper part of the drive pulley to hold the end of the curtain fabric.

Master carrier overlap arm

The overlap arm can be easily dismantled when it is not needed.

Built-in sensor

No additional limit settings and wiring are necessary as the internal sensor will stop the motor automatically.

Powerful and Quiet 24V DC motor

The newly developed Glystro DC motor is whisper quiet and powerful. It can drive a two-way drawn curtain up to 50kg. The motor unit is light weight with the Glystro 25 weighing only 710 grams. The system is ready to use by inserting an AC adaptor plug straight into a wall power socket.

Runners

The large size roller runners provide excellent and smooth running capability and quietness. Addition and/or removal of these runners is simple by just removing a stopper located at both ends of the track.

Quick setting with a Safety Lock

The motor unit is easily mounted by inserting the motor shaft into the drive pulley hole. A locking mechanism built into the set lever allows secure mounting/dismounting of the motor.

Built-in Radio Receiver (optional)

The Glystro motor unit also comes with a built-in radio receiver (optional) that is compatible with Somfy's radio switches and hand-held transmitters and with Home Automation Systems. Curtains can be controlled individually or grouped.

Stylish, Quiet, Smooth...

The Glystro automated curtain system is designed to provide your customers with utmost comfort and convenience. The benefits of a Glystro automated curtain include:

Compact, Light weight & Easy to Install

Its compact and light weight design makes Glystro easy to install without any unsightly wires or cords. The slim motor weighing only 710 grams, combined with a simple track connection harmonises well with various types of windows and curtains.

Smooth & Quiet

Smooth and quiet operation with the latest innovation – a belt driven system that ensures your customers enjoy complete peace of mind. The belt has an embedded steel core that eliminates tension and elongation during operation.

Greater Convenience

Glystro gives your customers the freedom to choose whether to control the curtains by remote control, wired switches or Home Automation systems. The Glystro curtain system has a manual override function – a built-in electromagnetic clutch – that allows users to draw their curtains manually without damaging the system or their curtains.

Flexibility & Mobility

Let your customers curtains move around the room with Glystro! The curtain tracks can be customised to fit windows of different shapes and sizes. *Contact Somfy for availability and specifications.*

5 Year Warranty

Somfy offers a 5-year limited warranty on all Somfy motors, controls and accessories.
